A detailed electron micrograph of SARS-CoV-2 virus particles, showing their characteristic spherical shape and surface spikes. The image is rendered in a teal color scheme and occupies the left half of the slide, separated from the text by a diagonal line.

CI: Confidence Interval; COVID-NET: Coronavirus Disease 2019-Associated Hospitalization Surveillance Network

^aModel for number of conditions (variable) is adjusted for age, sex, and race/ethnicity

^bReference group is no underlying medical condition; Number of conditions is a sum of underlying medical conditions excluding hypertension; the most recent year of available BRFSS data for hypertension was 2017.

^cReference group is 18-44 years

^dReference group is female

^eReference group is non-Hispanic white

Adjusting for the presence of an individual underlying medical condition, higher hospitalization rates were observed for adults aged ≥65 or 45–64 years (vs 18–44 years), males (vs females), and non-Hispanic black and other race/ethnicities (vs non-Hispanic whites).
