**Definitions**

- **Close Contact:** Close contacts are someone who was less than 6 feet away from an infected person (laboratory-confirmed or a clinical diagnosis) for a cumulative total of 15 minutes or more over a 24-hour period. For example, three individual 5-minute exposures for a total of 15 minutes.

  **Exception** to close contact definition: In the K–12 indoor classroom setting or a structured outdoor setting where mask use can be observed (i.e., holding class outdoors with educator supervision), the close contact definition excludes students who were between 3 to 6 feet of an infected student (laboratory-confirmed or a clinical diagnosis) if both the infected student and the exposed student(s) correctly and consistently wore well-fitting masks the entire time. This exception does not apply to teachers, staff, or other adults in the indoor classroom setting.

- **Day 0:** For people who are symptomatic or test positive, day 0 is the first day of symptoms or, if no symptoms, the date of collection of the specimen for the positive test. For people who are following recommendations after exposure, day 0 is the date of exposure.

- **Exposure:** Contact with someone infected with SARS-CoV-2, the virus that causes COVID-19, in a way that increases the likelihood of getting infected with the virus.

- **Fever:** For the purpose of this guidance, fever is defined as subjective fever (feeling feverish) or a measured temperature of 100.0°F (37.8°C) or higher. Note that fever may be intermittent or may not be present in some people, such as those who are elderly, immunocompromised, or taking certain fever-reducing medications (e.g., nonsteroidal anti-inflammatory drugs [NSAIDS]).

- **High risk for severe disease:** See [https://www.cdc.gov/coronavirus/2019-ncov/need-extra-precautions/people-with-medical-conditions.html](https://www.cdc.gov/coronavirus/2019-ncov/need-extra-precautions/people-with-medical-conditions.html): also includes people living in high-risk settings such as nursing homes, homeless shelters, and correctional and detention facilities.
Immunocompromised: For the purposes of healthcare personnel guidance, moderate to severely immunocompromising conditions include, but might not be limited to those defined in the Interim Clinical Considerations for Use of COVID-19 Vaccines at [https://www.cdc.gov/vaccines/covid-19/clinical-considerations/covid-19-vaccines-us.html](https://www.cdc.gov/vaccines/covid-19/clinical-considerations/covid-19-vaccines-us.html).

Severity of COVID-19:
- **Mild Illness**: Individuals who have any of the various signs and symptoms of COVID-19 (e.g., fever, cough, sore throat, malaise, headache, muscle pain) without shortness of breath, dyspnea, or abnormal chest imaging.
- **Moderate Illness**: Individuals who have evidence of lower respiratory disease, by clinical assessment or imaging, and a saturation of oxygen (SpO2) ≥94% on room air at sea level.
- **Severe Illness**: Individuals who have respiratory frequency >30 breaths per minute, SpO2 <94% on room air at sea level (or, for patients with chronic hypoxemia, a decrease from baseline of >3%), ratio of arterial partial pressure of oxygen to fraction of inspired oxygen (PaO2/FiO2) <300 mmHg, or lung infiltrates >50%.
- **Critical Illness**: Individuals who have respiratory failure, septic shock, and/or multiple organ dysfunction.

Up to Date: Being up-to-date on your COVID vaccine means that you’ve received every dose of vaccine based on your eligibility. For more information please visit [https://www.cdc.gov/coronavirus/2019-ncov/vaccines/stay-up-to-date](https://www.cdc.gov/coronavirus/2019-ncov/vaccines/stay-up-to-date)

Congregate Settings: In certain congregate settings that have high risk of secondary transmission (such as correctional and detention facilities, homeless shelters, or cruise ships), CDC recommends a 10-day quarantine for residents, regardless of vaccination and booster status. During periods of critical staffing shortages, facilities may consider shortening the quarantine period for staff to ensure continuity of operations. Decisions to shorten quarantine in these settings should be made in consultation with state, local, tribal, or territorial health departments and should take into consideration the context and characteristics of the facility. CDC’s [setting-specific guidance](https://www.cdc.gov/coronavirus/2019-ncov/vaccines/stay-up-to-date) provides additional recommendations for these settings.
